Minocycline

Minocycline, may be prescribed by your provider. This is a strong antibiotic, generally used to treat acne. A standard dose is usually one pill twice daily, morning and evening. It is recommended that you take the dosage with food as it may cause a stomach upset. There are other symptoms that you may experience such as dizziness, headaches, stomach upset and yeast infection. Minocycline may also affect the efficacy of birth control pills so if you are on an oral contraceptive, you may choose to use alternative birth control methods in addition to the pill.

Minocycline should not be take during pregnancy or while nursing.

If you hae any questions or concerns while on Minocycline, please call our office and speak to one of our nurses.
